

NIKHAR JAIN

Java Backend Developer | Software Engineer | Microservices Developer

• Mumbai, Maharashtra • (+91) 8827117040 • nikharjain27@gmail.com • [linkedin.com/in/nikharjain](https://www.linkedin.com/in/nikharjain) • [portfolio-nikhar-jain](#)

PROFESSIONAL SUMMARY

Java Backend Developer with 4 years of experience in Spring Boot, Spring Security, Hibernate/JPA, PostgreSQL, and AWS building microservices and REST APIs for enterprise banking and fintech platforms at Capgemini. Worked across 3 backend modules covering real-time pricing, customer data management, and contract lifecycle workflows. Experienced in full backend delivery from API development and database design to unit testing, CI/CD, and cloud deployment in Agile/Scrum teams.

KEY SKILLS

Languages: Java
Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Cloud
Architecture: Microservices, REST API Design, Distributed Systems, Event-Driven Architecture, Design Patterns
Databases: PostgreSQL, MySQL, Redis
Messaging: Kafka
Cloud & DevOps: AWS, Docker, Jenkins (CI/CD Pipelines)
Tools & Testing: Git, Maven, JUnit, Mockito, Postman, Swagger, JMeter, Jira
IDEs: IntelliJ IDEA, Eclipse
Methodologies: Agile, Scrum

PROFESSIONAL EXPERIENCE

Capgemini Technology Services Ltd.

Java Backend Developer (Associate Consultant)

June 2022 – Present | Mumbai, India

Project: PriceLab — Enterprise Banking Platform (Customer Data Management, Dynamic Pricing, Contract Management)

- Developed and maintained 3 enterprise backend microservices for Customer Data Management, Dynamic Pricing Engine, and Contract Management using Java and Spring Boot.
- Built and maintained 12+ RESTful APIs supporting real-time pricing, customer data access, workflow processing, and banking integrations.
- Integrated Kafka-based asynchronous communication between microservices for scalable event-driven processing.
- Implemented Redis caching for frequently accessed pricing and customer data, reducing repetitive database hits and improving response performance.
- Worked with Spring Cloud components including Eureka, API Gateway, and Config Server within the microservices ecosystem.
- Containerized applications using Docker and worked with Kubernetes for deployment orchestration and scalable infrastructure management.
- Designed optimized persistence layers using Hibernate and Spring Data JPA with PostgreSQL and MySQL databases.
- Built a Customer Data Hub integrating 5 banking systems with validation, reconciliation, and deduplication logic to improve data consistency.
- Configured Jenkins CI/CD pipelines and AWS-based deployment workflows across development, UAT, and production environments.
- Achieved 80%+ unit test coverage using JUnit and Mockito; documented APIs using Swagger and executed load testing using JMeter.
- Used GitHub Copilot to accelerate development, generate boilerplate code, improve testing productivity, and streamline backend workflows.
- Worked in Agile/Scrum teams, handling sprint-based feature delivery, bug fixing, production support, and release management.

Key Achievements

- Improved data consistency across **5 integrated banking systems** by implementing deduplication and reconciliation logic in the Customer Data Hub microservice.
- Reduced **API response latency** across 3 microservices by diagnosing and rewriting inefficient SQL queries and refactoring service-layer logic.
- Supported **stable UAT and production releases** by identifying and resolving critical defects before go-live across multiple release cycles.

PROJECTS

Prices — Dynamic Pricing Engine — *Java, Spring Boot, Spring Security, PostgreSQL, Hibernate/JPA, AWS, Docker, Jenkins*

- Built a **real-time Dynamic Pricing Engine** that evaluates customer tier, contract terms, and configurable business rules to compute prices on demand, serving **4 downstream banking systems** via RESTful APIs.
- Secured **8 API endpoints** using **Spring Security** with role-based access control; automated **Docker + Jenkins** deployments on **AWS**, supporting consistent and automated deployments to staging and production.
- Optimized **5 critical PostgreSQL queries** for pricing calculation lookups, improving response throughput under high-frequency concurrent transaction loads.

Customer Data Hub — Centralized Data Management Service — *Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, MySQL, REST APIs*

- Developed a **centralized microservice** aggregating customer records from **5 source systems** into a single unified view, with deduplication and reconciliation logic to eliminate data conflicts across platforms.
- Exposed **6 RESTful APIs** for customer retrieval, update, and search; structured the service using **Repository, Factory, and Builder** design patterns for clean separation of concerns and testability.
- Maintained **good unit test coverage** using **JUnit** and **Mockito** across all service and repository layers; managed all tasks via **Jira** in 2-week Agile sprints.

Contract Management Platform — Lifecycle & Workflow Service — *Java, Spring Boot, Spring MVC, REST APIs, MySQL, Hibernate/JPA, Swagger, JMeter*

- Delivered a **Contract Management service** handling 5 lifecycle states (creation, amendment, approval, activation, expiry) with server-side rule enforcement preventing invalid state transitions in a live banking environment.
- Documented **15 API contracts** in **Swagger** for integration teams; ran **JMeter** load tests to validate system performance and stability at expected production traffic levels.

CERTIFICATIONS

AWS Certified Developer – Associate | Amazon Web Services

AWS Certified Cloud Practitioner | Amazon Web Services

EDUCATION

Master of Computer Application (MCA)

2020 – 2022

Acropolis Institute of Technology and Research (AITR), Indore

Bachelor of Computer Application (BCA)

2017 – 2020

Acropolis Institute of Technology and Research (AITR), Indore
